DETAILED ACTION

Priority

1. Applicant's claim(s) of Continuation priority to WIPO application PCT/SE99/02239 filed 12/1/99 and Swedish application 9804186-6 filed 12/3/98 are acknowledged.

Because applicant elected to enter US prosecution as a CIP of an international application rather than as a national stage application and 35 U.S.C. 371, the International Bureau does not take on the handling of the certified Swedish application on behalf of the USPTO. As such the applicant needs supply the USPTO a certified copy of the Swedish application to receive benefit of the Swedish priority link under the Paris Union.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, as this case includes substantially algorithmic claim elements, a flowchart is needed comprising the claim elements. No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

3. New drawings will be required contingent upon allowance acceptable to drafting.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States
- (c) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

5. Claim 2 is rejected under 35 U.S.C. 102(b) as being anticipated by Gillman which discloses:

(re: cl 2) a method for sorting and stacking objects having at least three storage stacks (a-j fig 1)

numerically identifying and marking each object (DSN, (col. 5 L 14-16)

sorting and stacking the objects having the lowest numbers onto the first available stack, the objects having the next highest numbers beyond first stack's capacity placed onto the next successive stack (c5 L 16-32)

and sequentially stacking the objects low number to high number on each stack (c5 L 1-15; fig 2)

sorting and stacking the objects having the next lowest numbers on the successive stack onto a lower earlier available stack and sequentially stacking the objects low number to high number on the second stack (c4 L 10-22, the second sorting pass moves objects on the second or higher stacks toward available space on the first stack);

Allowable Subject Matter

6. Claims 1 and 5 are allowed.
7. Claims 2-3 and 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
8. Of particular significance in defining over the prior art is applicant's restacking of objects using sequence numbers when an object's number on a second stack is out of sequence with numbers in an adjacent stack.

Of particular significance is Gilman which resorts stacks of objects by passing the objects through the sorting process by re-sequencing objects by iteratively sorting the entire collection of objects by sorting contingent on a successive less significant/more significant digit. Gilman does not compare sequence numbers of adjacent stacks for a restacking determination.
